

ARDEX TWP™

Tilt Wall Patch and Finishing Compound for Vertical Concrete Walls

Finishing compound to fill and smooth vertical concrete surfaces prior to sealing or painting. Tougher and more durable than traditional gypsum and latex patches. Can be sealed or painted as soon as the surface is hard.

Use for tilt-up walls, pre-cast or poured in place concrete panels, and other concrete or masonry surfaces; fill surface spalls, gouges, cracks, dents, chips, bug holes or honeycombs – any type, size or shape of surface defect.

Key Features

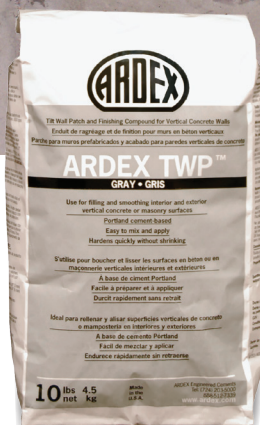

- Portland cement based
- Trowelable
- Mixes with water
- Interior and exterior

Installation

- **Packaging:** 10 lb (4.5 kg) bag
- **Coverage:** 100 to 150 sq. ft. per bag at a skimcoat (9 m² to 14 m²)
- **Thickness:**
 - True featheredge
 - Thicker applications take longer to harden
- **Pot life:** 15 to 20 minutes
- **Seal or paint:** 15 to 60 minutes

Performance

- **VOC:** 0 g/L
